BA Aggregate Lift 1500kg

We have now released a new version of the popular BA Aggregate Lift with a lifting capacity of 1500kg.
It was developed in response to our customers' requests to handle heavier driveline components such as electric motor/gearbox packages for modern electric trucks. The biggest visible change is that the distance between the mounting plate and the front wheel of the aggregate lift has been extended to provide more stable use. The lifting cylinder has been given a guard to protect the piston from impacts and dirt.

The BA Aggregate Lift is a Swedish-made, high-lifting aggregate lift for dismantling/assembling truck and bus gearboxes, electrical components, rear gears and other heavy components at a comfortable working height.

Low dead weight and strong swivel wheels make the lift easy to move. The front wheels can be locked in a straight-ahead position and one of the rear wheels is equipped with a strong parking brake. The aggregate lift is equipped with an efficient hand pump that can be moved and used on both sides of the lift.
The lift's mounting plate is of a universal model and fits all types and makes of gearboxes. The gearbox is secured with two tension straps and rests on four adjustable bolts. The mounting plate can be tilted continuously lengthwise using a standard ratchet handle and laterally using two clamping screws.
.

TECHNICAL DATA:

Maximum lifting capacity 1500 kg

Minimum height (above mounting plate) 640 mm

Maximum height (above mounting plate) 1780 mm

Maximum width 870 mm

Total length 1700 mm

Wheel diameter 200 mm

Weight 190 kg

Ordernumber 2825

Accessories - Rear gear holder, part no.: 1443

- Adapter, Scania R, part no.: 1441

- Step, part no.: 2844 (NEW)

Lifting capacity 1500kg. Stable and safe against tipping forward.

Lifting piston guard to protect the piston from impact or dirt
